### Purpose of Inspection:

This inspection was requested by the Operator's representative, geologist Tom Freese, via email correspondence on 03/24/2008 to Lynn Kunzler.

### Inspection Summary:

This site is active after a 10 year inactive status. Operator was hauling stockpiled limestone from the site. Equipment included one loader with several belly dump trucks in the queue. Hauling and loading were done by Peck. No water truck was on site. Lynn Kunzler requested the loader operator, Brandon, to call for a water truck. Haul road was well graded and fugitive dust was noted. Highwalls were in fair condition. A recent range fire appeared to by-pass the site. Revegetation site was inspected and vegetation test plots were doing well. No difference in the vegetation species were noted in the different plots.

Photos were taken to document site conditions.

### Conclusions and Recommendations:

Operator needs to control fugitive dust (see attached photo) and problem needs to be addressed.
